Superior performance, value and design

SunPower® patented carports are designed by a talented and experienced team of in-house architects and engineers working with your team to reduce energy costs, enhance the value of your real estate and strengthen your commitment to sustainability.

Realize the energy potential of parking areas

SunPower’s long span canopy brings the flexibility of our garage top solution to ground lots. Each structure covers two parallel parking rows and an internal drive aisle using a single contiguous PV-covered canopy, maximizing energy production.

A track record of success

With more than 100 MW of carport installations nationwide, SunPower knows what it takes to meet milestones, keep your project on schedule and minimize any disruption to your organization.
